# HYDRANT FLUSHING AND TESTING BEGINNING AUGUST 25<sup>th</sup>, 2025- SEPTEMBER 30<sup>th</sup>

What to expect: you might notice some sediment and discoloration in your water. If this happens run your water until it's clear again. This is normal, as hydrant flushing can cause some sediment to break loose and move through the water system.

This is being done as part of annual maintenance and because we are testing the hydrants for our fire rating. A good fire rating helps keep homeowner insurance costs down and ensure North Bonneville is fire ready. Thanks for your patience and understanding.
