Proposal for Welcoming Kiosk:

This proposal is for entire refurbishment or replacement of current welcoming kiosk including area map and protective structure for rain and shade.

Proposal "A": Hand carved relief map on huge solid redwood log covered with log structure "lean to". Map would be carved directly onto huge redwood log that has had 1/3 of it's surface cut off to provide a 5 foot by 9 foot surface area for map carving. Impressive log. Can be mounted on pedestal like logs set in concrete or mounted directly on the ground set in concrete. Map will suggest local topography as well as feature all applicable points of interest in the area. (see map attachment). Attention given to ease of orientation and navigation with clear "you are here" type scenario. (again, more details in map attachment). Log "lean to" structure will be pole construction, with support logs set in concrete or attached to existing brackets at site. Poles cross members and roof joists will be drilled and bolted together. Bid includes a cedar shake roof. (see diagram "A" for structure specifications). Upper cross member in log structure will have letters carved in it to define Kiosk.... For example, "information" or "welcome" or "area map" etc. Any removal or additions to map info can be done by me on site with minimal impact to map.... Or even no impact. Since specific info about businesses and such are no longer needed on the map (info will now be available on new directories) then I would expect minimal changes to the area map. Bid includes all materials, hardware and equipment to complete and install project.

Total cost of carved map: \$3000.00

Total cost of log Structure: \$2000.00

Total Plan "A" Welcoming Kiosk cost:
\$5000.00

Note: Option of only doing the map and doing log kiosk at a later date. Still would look great.
