Proposal for Entrance Main Directory Signage:

This proposal is for removing cluster of existing signs and replacing them with large log signage.

Proposal "A": Huge 5 foot by 9 foot sign made of one 8 inch slab of redwood or two 2 ½ foot by 9 foot by 8 inch redwood slabs. Slab(s) to be mounted on huge 5 feet in diameter by approx.8 feet tall redwood log. Log will be notched out to accommodate sign slab(s). Sign slab will be glued and bolted to base. Log base will be set in concrete with rebar reinforcement . Sign information will be carved in to slab and painted and sealed. While any font is available, the one I have offered is for simplicity and readability. Font Size will depend on how much info is required on the sign. As an alternative to carving right in the slab, I can carve info into a separate plank and then attach it to the slab. This would make it easy to replace or remove. Top choices for colored letters would be black or white with opposite colored background. The sheer size of this sign makes it easily readable and instantly impressive. Bid includes all materials and hardware and equipment to complete and install project.

Total cost of Plan "A" main directory and installation:
\$5,000.00

Note: Because of the low odds of such things as the golf course or the hot springs, or city hall disappearing, I think it would be safe to carve info into large slab. There will be ample room to add info in the future and it is still possible in the unlikely event that a main entity will leave that I can carve out the old space and add something new in its place. Attached planks I feel are not as necessary here as in the sub-directories. Being that the sub-directories reflect more businesses, there is more possibility for removals and additions of signs making it more applicable with the sub-directories.
