Proposal for City Welcome Sign Refurbishment:

This proposal is to raise up existing city welcome sign and mount on oversize logs to make it more visible. Also included in this proposal is total refurbishment of existing sign which includes, cleaning, repainting, and resealing bringing it up to fresh new looking standard. Two designs are offered, each being the same cost. One is for logs that are cut flush to the top of the sign (style A) and one for logs that protrude past the top of the sign a bit (style B). Log bases will be approx. 2 feet in diameter and depending on style selection, 5 feet to 8 feet tall. Logs will be coastal sequoia redwood. Existing sign will be notched in to log bases and secured with glue and bolts. Log bases will be set in concrete with rebar reinforcement. Both bids include all design time, materials and hardware and equipment for installation of completed project.

Total cost of completed refurbishment and reinstallation on new log bases:

Style "A" Flush cut logs.....\$1500.00

Style "B" Protruding logs.....\$1500.00

Note: Sign can be redone in a larger size with new design or with original design at a higher expense but considering cost effectiveness on these projects, I think the money better spent on other aspects of the signage proposals. This sign can be redone in the future and as far as design goes.... the old logo is well recognized and that is worth a lot in itself. Changing the design may set back recognition time already gained with the existing sign.
